

The Kolbs .xls spread sheet opens in the Mac app. *Numbers* for me. It doesn't render it, because I am running an old version. I am using a Hacinosh - (a Dell-mini running OS 10.6) which means I can not easily update things without potentially loosing my whole operating system... I used google sketchup to skillflex on that program. The perspective would not lineup perfect so the dots are a little off the mark..

*Yellow Dots - My learning-constitution as of now

*Purple Dots - My ideal learning-constitution by the end of the year.

I decided on an even 20% input in all fields. I decided on an even growth because I see this pattern in nature, like a trees growth rings. I also realized $20+20+20+20 = 80$ and it reminded me of the 20/80 pattern in nature which is recognized as the Pareto Principle- http://en.wikipedia.org/wiki/Pareto_principle . This means with a 20% input I will be getting an 80% increase!

*(as perceived by me) I do recognize I have a blind spot.
